

ARE YOU WASTING VALUABLE ENERGY?

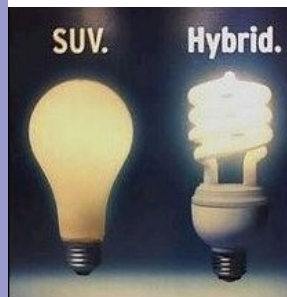

Steam Turbine Generators, LLC is dedicated to providing small to moderately sized ($\leq 15\text{mw}$) steam turbine generator packages, and only steam turbine generator packages.

Our extensive and long standing engineering expertise make us exceptionally qualified!

STEAM PRESSURE REDUCING STATION

SMALL BACKPRESSURE T-G PACKAGE

The escalating cost of energy coupled with the need to minimize the continued pollution of our planet, dictates a new approach to addressing our energy needs and consumption. There may be opportunities for free energy in your plant just waiting to be tapped.

If you are creating steam for use in your plant's process (heating, drying, cooking, etc.), and are using a pressure reducing valve / station to reduce the steam pressure generated at the boiler to a pressure suitable for your process, you are wasting valuable energy.

By replacing your pressure reducing valve / station with a backpressure steam turbine generator package, you will be able to reduce your electric utility bill. Pay back period for this capital investment is typically less than two years, and in many instances less than one year.

Contact us to discuss the possibility of reducing your energy cost.
